

CARE AND CLEANING FOR TUFF-PLY

TPO FLOORING MEMEBRANE

The proper care, cleaning and maintenance of your TPO decking is quite simple because of the basic properties and longevity of the material itself.

Periodic cleaning is the primary maintenance. Alpha Systems suggests Using Murphy's oil soap with a soft nylon brush or sponge. DO NOT USE solid or granulated cleaners, as thy will mar the natural finish.

DO NOT USE Armor-All or other oil/solvent base cleaners, as they will leave a slick surface.

A good, thorough cleaning with some elbow grease and the suggestions above should keep your decking looking good and remove most stains. For more stubborn stains, you should contact your authorized dealer.

If you keep your Tuff-Ply TPO flooring clean, you will be performing the primary maintenance necessary to keep it looking good and extend its longevity.

Tuff-ply is UV resistant. It will not retain odors or rot. It is cool to the touch to protect skin and lasts longer than carpet.
